savvyPrint™

MANAGED SERVICES

And your print fleet costs are...

If you have no idea
just how much you spend
annually on print-related
assets, you're not alone. ITsavvy's
savvyPrint can change all of that. We'll
provide remote management of your print
fleet and prepare line-item cost visibility as well.
And savvyPrint clients are backed by our U.S.-based
technical staff, monitoring your network fleet 24/7.

Consultative print management.

We'll work with your new, your old and your troubled printers, and transform your environment into a productive fleet. Our savvyPrint solution is a remote service that monitors the performance and efficiency of your print devices, automatically fulfills supplies when needed on network attached equipment as well as remote notification and problem remediation with onsite visits when required. You'll have access to ongoing reports with total cost of ownership visibility.

FLEET MANAGEMENT. Remotely monitoring your costs. We're not in the copier business, we're an IT company, so you can rest assured our goals will always be in alignment. Our propriety savvyPrint service employs a data collection agent to capture your usage and downtime events. We know which printers are the most cost-effective, and we know which ones fail the most often — so we can help you understand your fleet costs and utilization performance.

SUPPLY PROCUREMENT. Automatic supply generation based on per-device statistics. Having a closet full of toner cartridges is a budget drain. We monitor usage and ship only the supplies you need, when you need them. And new toner cartridges are clearly labeled to facilitate easy storage, and replacement.

PROBLEM REMEDIATION. We aren't picky about the devices we work on. As a vendor-neutral VAR, we are trained to repair all of the top brands. We'll send our certified technicians to get your fleet up and running when problems arise.

OPTIMIZATION. TCO reporting. Our clear reporting options break down the numbers for true cost visibility. We'll help you decide when it's time to repair or time to upgrade. If an old workhorse is still viable, we won't convince you to trade it in just because we sell printers.

## Who is ITsavvy? We are, of course.
