Brand protection is one of the biggest concerns organizations have when they partner with companies to manage e-waste. Businesses are also concerned about environmental stewardship and making sure that their e-cycling partners support those efforts.

That’s where Goodwill E-cycle can help. Understanding these needs, we have a dedicated team that is here to help you formulate a responsible management plan for current and future e-waste. Goodwill has been recycling and repurposing since our inception over 100 years ago.

Electronic waste is a growing issue for many companies. With the rapid pace of technology, the life cycle of these electronic components is getting shorter and shorter, creating more e-waste than ever before.

“We give our waste to a recycler, but we’re paying way too much for disposal.”

Goodwill E-cycle is affordable

“I hear that all recyclers are not the same and I have security concerns. Things like chain of custody and proper hard drive recycling.”

Goodwill E-cycle is secure

“Our company generates e-waste constantly, and I don’t know of anyone that can do regular pickups.”

Goodwill E-cycle offers pick-up service

“I have so much electronic waste stored at our facility and I don’t know what to do with it all.”

Goodwill E-cycle is the answer
The protection of your brand is our top priority.

From the moment your material is picked up, we understand the importance of ensuring your data is secure. Our transportation, receiving, onsite security and material flow have all been designed to protect chain of custody and to assure our partners that their data can never be recovered.

We are proud to be R2:2013, ISO 14001 and OHSAS 18001 Certified for our Goodwill E-cycle operations. These certifications show a high-level commitment to the safety and security of the computers, tablets and other components that are given to us. The R2 Standard (commonly known as R2 Certification) is the premier global environmental, worker health and safety standard for the electronics refurbishing and recycling industry.

An R2-certified company is able to assure its customers that it takes appropriate measures to protect data, worker and public health, and the environment. A company that is R2-certified is able to make the same assurances about each of its downstream vendors as well. All of a customer’s IT assets will be refurbished or recycled responsibly and legally, no matter where in the world the services are provided.

At Goodwill E-cycle, our achievement of the R2 Certification shows our commitment to the security of our customers, their data and their brand.

Our data destruction procedures have been audited by third parties and validated to assure our partners that their data can never be recovered.

Official Technology Recycling Partner of:

ITsavvy is an integrated IT products reseller and technology solutions provider for businesses, schools, government and organizations. ITsavvy offers more IT products and faster delivery than many of its competitors.
